ABOUT HOLAR SOFTWARE

Holar Software combines strategic thinking and emerging technologies to provide innovative solutions that consistently break new ground.

We deliver **high-quality work** through our focus on bidirectional communication, responsive customer service, client education, accurate project management, product quality, and an ethical approach to business. We have a well-documented track record of performing work on budget and on deadline.

HOLAR SOFTWARE

DESIGN

Effective web design and art are not one and the same

WEB DEVELOPMENT

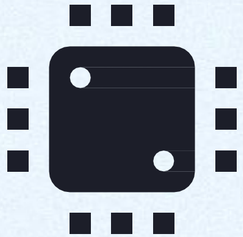
We build stable and distinguished by visual identity web applications your customers will love

MOBILE APPLICATION DEVELOPMENT

Mobile Apps have been an essential part of our lives and why not?

DEVELOPMENT PROCESS

- INFORMATION ARCHITECTURE
- WIREFRAMES
- USER INTERFACE DESIGN
- DEVELOPMENT ENVIRONMENT
- IMPLEMENTATION



- SEO
- TRAINING & DOCUMENTATION
- TESTING
- LAUNCH
- POST LAUNCH MAINTENANCE

INFORMATION ARCHITECTURE

Our focus in this phase is to make content easily navigable. Out company works cooperatively with our clients to help them define their information architecture so that users can find information/functions quickly and easily. Our goal is to limit to three or less the number of “clicks” users must perform to reach their first destination on the site.

WIREFRAMES

Holar Software’s goal is to make sure we document the necessary details to make a project functionally accurate in the annotated wireframes we produce. However, it can be difficult to focus people on function instead of design. As such, we focus on producing wireframes that are quick to build and look good, but that aren’t over designed, so we can keep our audience focused on the functional specification. This process enables us to get feedback early on in the project by doing quick wireframes. One benefit of this wireframing process is that it helps prevent going down the wrong path and requiring expensive rework late in the process. The process also creates a detailed blueprint of how the system should behave to guide our programmers.

USER INTERFACE DESIGN

This stage typically begins after the information architecture, wireframes has been finalized. Holar Software develops the user interface that will represent the new platform on the web and the mechanisms through which the end user will navigate and interact with the site. This design will emphasize usability, but also provide an attractive web presence for the new platform.

DEVELOPMENT ENVIRONMENT

In order to facilitate the rapid development and deployment of the new platform website, Holar Software will setup a development server and utilize a version control system for all programming code. Holar Software's use of version control improves communication among our developers, protects files during rapid development, enhances development workflow, improves the quality of the product, and saves time by improving productivity and reducing likelihood that defects will be introduced into the system.

IMPLEMENTATION

During this phase Holar Software will customize the base technologies that were already selected. During this phase we will merge the user interface design with the functionality by creating templates.6. We work with our clients to ensure search engine optimization (SEO) when building websites. SEO has as much to do with your websites' content as it does the website's organization and programming. Holar Software will ensure that your website is built in such a way that search engines will be able to read your content. We do this by following best practices that allow us to maximize the presence of your website in the major search engine Google.

SEARCH ENGINE OPTIMIZATION

We will work with you to ensure that the various members of your organization fully understand how to use the content management system and are comfortable utilizing the system to its fullest capacity. We find that the average layperson can gain a solid understanding of how to use the Wordpress publish platform to perform content.

TESTING

Thorough testing is an integral part of Holar Software's approach to website development and one of the final phases. We test the Internet-based systems we develop for browser compatibility. Holar Software is ensure that the systems we develop are bug-free, meet client expectations and fulfill end users' functional and aesthetic needs. Holar Software performs both automated and manual testing on the websites that we develop.

LAUNCH

Holar Software works with our clients to ensure a smooth launch. We build a detailed launch plan that plans out each step in the process and who is responsible for that step. We will perform a trial run of this process and ensure that the steps work as prescribed. This approach minimizes the chances that an unexpected event will occur and disrupt the process.

POST LAUNCH MAINTENANCE

We will provide support up to the transfer of ownership to the platform owner. In addition to that our team can provide high level of support to the new platform after the launch (Optional)
